

Roediger

The Roediger® Monitoring System RMS.

Complete overview at any time

A brand of
Aqseptence Group

The new digital standard for wastewater management.

Controlling and programming with cutting-edge technology: RMS

A future-proof infrastructure is the backbone of every community. The Roediger® Monitoring System RMS makes a significant contribution to this – through seamless and reliable monitoring of your vacuum sewer network.

Smart technology for every local authority – reliable and sustainable

Roediger® wastewater systems have earned a reputation for absolute reliability and performance over a long period of time. From now on, the Roediger® Monitoring System RMS guarantees this functional reliability at any time and in a very simple way: With smart and innovative technology, RMS monitors your vacuum station around the clock, shows you any errors in real time and helps you to quickly locate trouble spots – saving you time and therefore money in day-to-day operation. In addition, the risk of possible consequential damage is reduced and the operational reliability of your wastewater infrastructure is increased enormously.

Investment with a future – flexible and scalable

New living space is created – RMS expands with it: 256 possible collection chambers per cable guarantee that your system will still be able to keep up tomorrow and that you will not have to invest in additional infrastructure. Neither complex hardware nor costly programs are required for daily operation: The module can be programmed quickly and easily via an app on your cell phone. And of course, you can easily transfer all data to an existing control system.

Secure the infrastructure of your community with a system – with Roediger® RMS. We will be happy to consult you individually:
